

GEOGRATE DUPONT™ PLANTEX® GROUND GRID

INNOVATIVE SOLUTION FOR GRAVEL PAVEMENT STABILIZATION

APPLICATIONS AND ADVANTAGES:

APPLICATIONS

DuPONT™ PLANTEX® GROUND GRID uses the natural force of a three-dimensional honeycomb, formed from a technologically thermally welded advanced textile in order to create a stable as well as water permeable surface, which at the same time minimizes the shift of the gravel. This technologically advanced product is entirely neutral to the environment and available in many sizes.

ADVANTAGES

- ▶ minimizes the gravel shift (owing to the smallest grate mesh size)
- ▶ minimizes the formation of wheel tracks in road foundations
- ▶ very resistant to tear and rupture, 100% non-woven, thermo-weldable technology to obtain the most durable structure
- ▶ easy to mount
- ▶ light and compact

CHEMICAL RESISTANCE

It is resistant to chemical substances, fungi, roots and bacteria present in the ground. It is completely neutral to the natural environment.
